

Accessing and Using CAEN

Computer Aided Engineering Network (CAEN)

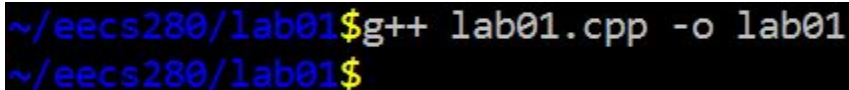

- CoE's computing resources
 - i.e., remote computers you can borrow
- Establish connection to computer through CLI
 - You can't plug a monitor into these servers from your bedroom
- Why use CAEN
 - Faster (much faster)
 - It's similar to the Autograder environment (MacOS and Window are NOT; this causes )
 - More secure
 - You won't lose your files if you lose your computer
 - We'll ask you if you're using CAEN first in OH
- CAEN is great obviously but how do we get there?

Command Line Interface (CLI)

- Interface for a computer without a GUI (graphical user interface)
 - Think without moving your mouse and clicking
- Run programs by from a prompt:
 - Calling their name
 - Providing them arguments
 - Example: `g++ [flags] [arg1] [arg2] ...`
- Everything you know how to do on your computer can be done on the CLI
 - (maybe not photo editing - easily)
 - *project 2
 - If you need a GUI for CAEN look into VNC (see quick reference docs on the drive)

A terminal window with a black background. The prompt 'Max@DESKTOP-U20IF15:~\$' is visible at the top in a light gray font. The rest of the terminal is empty.

```
Max@DESKTOP-U20IF15:~$
```

A terminal window with a black background. The prompt '~ /eecs280/lab01\$' is visible in blue and yellow. The command 'g++ lab01.cpp -o lab01' is entered in yellow. The prompt '~ /eecs280/lab01\$' is visible again at the bottom in blue and yellow.

```
~/eecs280/lab01$g++ lab01.cpp -o lab01
~/eecs280/lab01$
```

How do you open your CLI?

- MacOS
 - Search 'Terminal' in spotlight, and run it
- Windows
 - Currently support is in beta on the latest version
 - If you're up-to-date: search 'bash,' and run it
 - Temporary options will be explained in the next slide
- Linux
 - Open your terminal
 - ...

Secure SHell (SSH)

- Program to connect to remote computers
- CAEN is found at: **login.engine.umich.edu**
- Run in the command line:

- `ssh [USERNAME@]IP`

```
Max@DESKTOP-U20IF15:~$ ssh mxsmith@login.engine.umich.edu
```

- For not up to date Windows users only:
 - PuTTY is a GUI that provides ssh capabilities, [download here](#)
 - Change the hostname to CAEN's IP and click open

How do you get your file there?

- SFTP with Sublime
 - See Piazza post 14
 - There are other options for SFTP, use at own risk
- SCP local_source remote_destination
 - You can download files by switching paths:
 - SCP remote_source local_destination
 - Path formatted for remote computer :
 - IP:PATH_TO_FILE
 - (No go on PuTTY)
- MFILE (<http://mfile.umich.edu/>)
 - Just upload and download via an old website
 - Very slow. Please only use this as a temporary solution to get started
 - Using one of the other options will save you TONS of time in the long term
